ADMISSIONS AND REQUIREMENTS

Candidates interested in applying must have a Bachelor’s degree and have already taken the following courses:

- Mathematics (MATH, at least 4 semesters)
- Physics (PHYS, at least 2 semesters)
- Chemistry (CHEM, at least 1 semester)
- Thermodynamics, Heat Transfer, Energy Systems (THE, at least 1 semester)
- Strength of materials, mechanical drawing, mechanical design and production (MECH, at least 2 semesters)

A reasonable knowledge of English is also required (level B1 or equivalent). More details at: http://younuclear.ing.unipi.it/

Candidates can send their CVs and a pre-application request before the end of April to younuclear@ing.unipi.it in order to determine whether they are suitable for enrolment. Consideration of applications submitted after April may be possible but is not guaranteed. Successful applicants must follow the University of Pisa’s standard enrolment procedure. More details at: www.unipi.it/eu-student-enrolment or www.unipi.it/non-eu-student-enrolment

DEADLINES AND FEES

Deadline details can be found at: http://matricolandosi.unipi.it/en

Fees depend on the student’s country of origin and can vary from € 407 to € 2,354. Information on fee waivers, extraordinary contribution and scholarships can be found at www.unipi.it/tuition-fees/

MSc Programme in Nuclear Engineering
The University of Pisa (UNIPI) is a public institution composed of twenty departments, with high level research centres in the fields of agriculture, astrophysics, computer science, engineering, medicine and veterinary medicine.

Established in 1343, UNIPI is one of the most prestigious Italian higher education institutions and a modern centre for teaching and advanced research. One of the University’s main strategies is that of internationalisation as it aims to engage with students and researchers and establish long-term partnerships with universities and public and private institutions from all over the world. With a current student population surpassing 54,000, UNIPI offers a large number of degree programmes taught in English and a variety of exchange programmes.

Study at the Department of Civil and Industrial Engineering

The Department of Civil and Industrial Engineering was established in 2012 following the Italian Universities reform which saw the merging of the former departments of Mechanical, Nuclear and Production Engineering, Aerospace Engineering, Chemical Engineering and Materials with that of Civil Engineering. As a result, the current department teaches most of the well-established degree programmes and leads research activities in traditional disciplines within engineering.

The programme is taught completely in English and lasts 2 years, with 60 ECTS credits earned in each. It is closely involved with the European Nuclear Education Network (www.enen-assoc.org) and with the European Fusion Education Network (www.fusenet.eu) with broad possibilities of student exchanges.

PROFESSIONAL PROSPECTS

Students will be taught specific skills in Nuclear Engineering that can be transferred to and utilised in several fields including nuclear energy applications and various other major industrial endeavours. Nuclear Engineering graduates can also pursue career opportunities in the fields of research and development. Students can otherwise continue their studies in Nuclear Engineering at the University of Pisa in the PhD Programme in Industrial Engineering with a specific curriculum in Nuclear Engineering and Industrial Safety, allowing them to enter into a career with a higher qualification. Many of our alumni have gone on to pursue careers and hold important positions in the field of nuclear engineering. More details can be found at: http://younuclear.ing.unipi.it/Testimonials.html

COME AND THRIVE

- Develop knowledge in advanced nuclear technology
- Gain an internationally renowned qualification
- Have the chance to do internships abroad
- Get involved with international cooperations

“Become a candidate for the certification of a European Master of Science in Nuclear Engineering”
